

VCG Commercial Banking Risk Management Case Study

Synthetic internal case study | Risk analytics, controls and governance

Use this case when an RFP requires risk governance, control design, analytics, decision rules and auditable management processes. It is intended to complement operational or sustainability evidence in cross-practice transformation.

1. Client Context

Commercial Bank C wanted to modernize credit decisioning while strengthening risk controls. The legacy process depended on manual document review and fragmented approval rules.

2. Business Challenge

- Reduce turnaround time without weakening risk controls.
- Create consistent decision rules across business units.
- Improve auditability of credit decisions.

3. VCG Intervention

Workstream A - Risk diagnostic

- Mapped decision points, controls, exceptions and approval authorities.
- Identified control gaps and duplicated review steps.

Workstream B - Analytics and decision rules

- Designed an automated credit-scoring approach with transparent decision rules.
- Established exception thresholds for manual review.

Workstream C - Governance

- Implemented model governance, audit trails and periodic control reviews.

4. Reported Outcomes

Metric	Reported result
Loan processing time	-40%
Manual review volume	-30%
Decision auditability	Standardized
Risk governance	Quarterly model review

5. Cross-Practice Application

Risk governance techniques can be layered onto operational analytics, supply-chain transformation and sustainability programmes to create auditable decision rights, control gates and escalation mechanisms. The banking outcomes below are case-specific and should not be generalized.

6. Evidence Tags

Capability: risk analytics | decision rules | controls | governance | auditability | analytics | transformation

Case evidence: loan processing time -40%; manual review volume -30%.
