

VCG Retail Digital Transformation Case Study

Synthetic internal case study | Cross-channel customer, inventory and data transformation

Use this case when an RFP combines inventory visibility, analytics, digital transformation and operating-model redesign. It is also a useful source for cross-practice supply-chain resilience and sustainability work when paired with specialist risk or sustainability evidence.

1. Client Context

National Retail Chain B operated 420 stores and a growing e-commerce channel. Online and offline inventory records were inconsistent, resulting in stock-outs in some locations and excess stock in others. Customer conversion was also constrained by poor product availability visibility.

2. Business Challenge

- Unify store and e-commerce inventory visibility.
- Improve demand and replenishment decisions using analytics.
- Create a consistent omnichannel customer experience.

3. VCG Intervention

Workstream A - Data and inventory visibility

- Mapped product, inventory and order data across POS, warehouse and e-commerce systems.
- Designed a common inventory-visibility data model and dashboard layer.

Workstream B - Analytics-enabled decision making

- Introduced demand and replenishment analytics for category managers.
- Created exception alerts for stock-outs and excess inventory.

Workstream C - Omnichannel operating model

- Redesigned processes for ship-from-store, click-and-collect and inventory allocation.

4. Measured Outcomes

Metric	Before	After	Reported change
Online conversion rate	Baseline	Improved	+15%
Customer acquisition cost	Baseline	Improved	-20%
Inventory visibility	Fragmented	Unified	Single view across channels
Decision cycle	Manual reporting	Exception-led analytics	Faster category decisions

5. Reusable Capability

The engagement established reusable capability in data integration, inventory visibility, analytics-led decision making and process redesign. For cross-practice transformation, these capabilities can be combined with sustainability frameworks, supplier-risk assessments and governance controls from other VCG practices.

6. Evidence Tags

Capability: inventory visibility | analytics | digital transformation | omnichannel operating model | data integration | transformation roadmap

Case evidence: online conversion +15%; customer acquisition cost -20%.
